

The Océ Colorado 1640 Printer... We broke all the rules in wide format printing

The NEW **Océ Colorado 1640 wide format printer, powered by UVgel**, will fill the gap between current technologies in the roll-to-roll production market. You will now have a clear choice when it comes to a large format printer that will deliver real production efficiency while lowering the operating costs, enabling you to profitably grow your business. Print volumes have continued to grow in the wide format marketplace for several years now and turnaround times continue to shrink as well. Analysts confirm that more than 40% of production print jobs need to be turned around within 24 hours and a majority of those are same-day. That is why we have developed this new UVgel technology, allowing our customers to compete in this new market space.

- The fastest 64" roll- to-roll printer on the market, with a print speed up to 1,710 sq/ft an hour with real sellable output quality
- Lowest running costs of any 64" printer with 30-50% savings on inks compared to other technologies such as latex
- Industrial designed production printer capable of printing higher print volumes and built to withstand high duty cycle
- Very high print quality across a wide range of applications without having to significantly compromise productivity by reducing speed
- On-the-fly quality assurance technology facilitates unattended printing and reduced print waste
- Automated maintenance provides consistent print quality and higher uptime
